I. HARDWARE TOKEN – AN INTRODUCTION

Dear Client,

A hardware token is a modern way to safely and conveniently authorise operations for Clients using **Millenet for Corporates**, which is Bank Millennium's online banking system.

This guide will help you to start using the hardware token as an authorisation tool. It will walk you through the configuration of the device up to the very performing of a transaction authorisation. This short description will prompt you to use a hardware token in practice in a way which will become simple and effective.

II. FIRST-TIME TURNING ON AND ASSIGNING A PIN

- To turn on a token keep the  button pressed for 3 seconds
- When you turn it on for the first time, the token will enforce the assignment of a PIN code. You must then use the numerical keyboard on the device to enter an own sequence of 4 digits
- Use the  key to accept the entered PIN

II. FIRST-TIME TURNING ON AND ASSIGNING A PIN

- The device will ask you to re-enter the PIN code and confirm it with the  key. The PIN code will then be assigned to the device
- If the PIN is correctly entered, the display will show the **PIN changed** message, and the device will then move into the standby mode (a Menu will appear on display with options)
- After the PIN has been assigned the token is ready to authorise operations

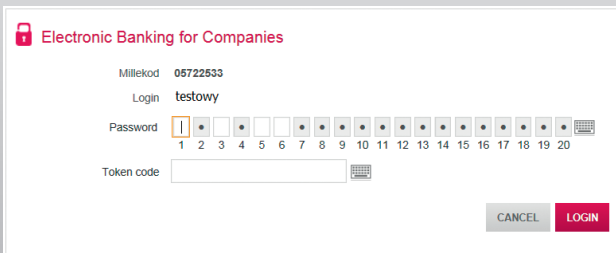

PLEASE NOTE! A PIN code must be known to the token's user only. It should not be disclosed to other persons.

The token shuts down automatically after 30 seconds of inactivity or can be switched off manually, by keeping the  key pressed for 3 seconds.

III. LOGIN AUTHENTICATION

- Follow the below mentioned instructions:
 - a. Turn on the token
 - b. Enter the four-digit PIN
 - c. Use the  button to accept option **Login**
 - d. Fill the **Token code** field with displayed **Login password**

The screenshot shows a login interface for 'Electronic Banking for Companies'. It includes fields for Millekod (05722533), Login (testowy), Password (a 20-character numeric keypad with '1' in the first position), and Token code (an empty field). There are CANCEL and LOGIN buttons at the bottom right.

 **Electronic Banking for Companies**

Millekod **05722533**

Login **testowy**

Password 1

Token code

IV. AUTHORISATION OF AN INDIVIDUAL TRANSFER

- Select the **Payments – Domestic Transfer** option
- Complete all the required fields, such as account and name of the recipient and title of payment
- Select the **Authorise and Send** action and then **OK** to confirm
- On the next screen, which presents details of the transfer, verify the earlier entered data, and then press **OK** to confirm
- The authorisation screen will be displayed as below:

Token transaction authorization

Put below values to token and generate authorization code

Transfer type **Single transfer**
Amount **1,00**
Account digits **439438**
Token code

How to use hardware token

1. Run token by press and hold **OK** for 3 seconds
2. Enter 4 digital PIN code and confirm **OK**
3. Choose transaction type which you want to authorize using **←** **→** and confirm **OK**
4. Enter amount and confirm **OK**
5. Enter account digits and confirm **OK**
6. Token will generate authorization code, which need to be entered above.

- Follow the instructions shown on the authorisation screen, namely:
 - a. Turn on the token
 - b. Enter the four-digit PIN
 - c. Use  and  to indicate the required transaction type (in this case this is the **Single Transaction** option) and accept 
 - d. Enter the amount in the token and accept 
 - e. Enter the digits of the account in the token and accept 
 - f. The authorisation code displayed on the token's screen should be entered in the field on the computer screen and the **Authorise** option selected

Use the same authorisation pattern also for other individual transactions, such as a transfer to ZUS (Social Security Authority), transfer to the Tax Office, a foreign transfer, etc.

V. HOW TO AUTHORISE MANY TRANSFERS

- In the **Orders Management** option select several transfers at the same time
- Select the **Authorise and Send** action and then press **OK** to confirm
- On the next screen, which presents transfer details, verify the earlier entered data, then accept **OK**
- The authorisation screen will be displayed as below:

Token transaction authorization

Put below values to token and generate authorization code

Transfer type **Multi transfer**
Amount **10,10**
Transfer count **4**
Token code

How to use hardware token

1. Run token by press and hold **OK** for 3 seconds
2. Enter 4 digital PIN code and confirm **OK**.
3. Choose transaction type which you want to authorize using **◀ ▶** and confirm **OK**.
4. Enter amount and confirm **OK**.
5. Enter number of transactions and confirm **OK**.
6. Token will generate authorization code, which need to be entered above.

- Follow the instruction given on the authorisation screen, namely:
 - a. Turn on the token
 - b. Enter the four-digit PIN
 - c. Use  and  to indicate the required transaction type (in this case this is the **Many transactions** option) and accept 
 - d. Enter the amount in the token and accept 
 - e. Enter the number of transactions in the token and accept 
 - f. The authorisation code displayed on the computer screen should be entered in the field on the computer screen and the **Authorise** option selected

VI. AUTHORISING OTHER OPERATIONS

In Millenet for Corporates other operations than transfers must also be authorised. They include the setting up of an account or standing order, or administrative operations, such as e.g. a change of user privileges.

To authorise such operations with a token, proceed as follows:

- After selecting the **Authorise** option for a given operation, the authorisation screen will be displayed, such as below:

Token transaction authorization

Put below values to token and generate authorization code

Transfer type **Other transaction**

Code **301670**

Token code

How to use hardware token

1. Run token by press and hold **OK** for 3 seconds
2. Enter 4 digital PIN code and confirm **OK**
3. Choose transaction type which you want to authorize using **◀ ▶** and confirm **OK**
4. Enter code and confirm **OK**
5. Token will generate authorization code, which need to be entered above.

- Follow the instruction shown on the authorisation screen, namely:
 - a. Turn on the token
 - b. Enter the four-digit PIN
 - c. Use  and  to indicate the required transaction type (in this case this is the **Other** option) and accept 
 - d. Enter the code in the token and accept 
 - e. The authorisation code displayed on the token's screen should be entered in the field on the computer screen and the **Authorise** option selected

How to enter an amount in a token

- A token's keyboard has no comma, so enter the amount of a transfer in one sequence including the grosze
- The grosze should be entered even if their value is zero

Examples:

- For the amount of 1500,20 – enter in the token the following digits in this order: 1 5 0 0 2 0
- For the amount of 0,30 – enter in the token the following digits in this order: 3 0
- For the amount of 0,05 – enter in the token the following digits in this order: 5
- For the amount of 250,00 – enter in the token the following digits in this order: 2 5 0 0 0

Quick selection of options

- The menu's options can be selected by entering in the token the option's assigned number; instead of using the  and  keys for this purpose.

*E.g. at the Menu level press 3, to select the **Other** transaction type.*

VIII. CHANGE OF PIN

To change the token's PIN:

- Turn on the token
- Enter the old PIN
- Use  and  to select **5. Settings** and accept 
- Use  and  to select **2. Change of PIN** and accept 
- Enter the old PIN in the token and accept 
- Enter the new PIN in the token and accept 
- Re-enter the new PIN and accept 
- If the PIN is correctly entered, the display will show the PIN changed message

If the PIN is incorrectly entered five times, the token will be locked out.
To unlock:

- Log on to the Millenet for Corporates application
- Select **Settings – Token Unlocking**

Token unlock title

Write code from token to page form

Token code

Unlock token code **457935**

How to use hardware token

1. Run token by hold **On** for 3 seconds
2. Token will show message 'pin blocked' - confirm **On**
3. Rewrite block code above and press **On**
4. Insert generated code block to token and press **On**

- Turn on the token
- Copy the code displayed on the token screen to the computer screen to the **PIN Lock Code** field and select **Generate Code**
- On the computer screen the token unlocking code will be displayed
- Copy the token unlocking code to the token and accept 

The **5. Settings** option in addition to changing the **PIN** also allows:

1. Change of language – Polish and English are available
2. Change of display contrast
– values from 00 to 05 are available

Select option **6. Information** to see the following data:

1. Serial number of device
2. Battery charging status
3. Bank's technical helpline numbers
4. Current date and number registered in the device
5. Token's software version

If you have questions or doubts please contact the Bank – no 801 632 632
or +48 22 598 40 31.
